

GENITAL WARTS

	<p>Genital warts are caused by a virus</p>
	<p>These are special warts that appear on men and women's genital areas</p>
	<p>Genital warts are passed on by direct skin-to-skin genital contact with an infected person.</p>
	<p>The two most common treatments are painting a liquid chemical or special cream onto the warts and washing it off later, or freezing the warts with a spray treatment.</p>
	<p>Always use a condom, but you also need to ask your partner if they've got an infection, and if they do make sure they get it treated</p> <p>For more information or support speak to your GP or nurse</p>
