

SYPHILIS

 <p>Syphilis Bacteria</p>	<p>Syphilis is an infection caused by bacteria</p>
	<p>Syphilis is usually caught by touching the private parts of someone who has the infection, then touching yourself</p> <p>It can also be passed on when having sex or oral sex</p>
	<p>Some people have no symptoms but can still pass on the infection</p> <p>Other people may develop sores on their private parts</p>
	<p>Syphilis is treated with injections of antibiotics</p>
	<p>Condoms can reduce the risk of transmission.</p> <p>Speak to your doctor or nurse about treatments and more information</p>
